Our curated design program has allowed us to interact with individuals from different education backgrounds and industries, proving that design is everywhere. We continue to thrive in this space and share ourculminated design experience to the world.

Overview

Details Of Course And Why Learn UI/UX?

UX designers who are aware of the process of the User Experience Design Process, seek to create and form the factors influencing the process deliberately. To do this, a UX designer will consider the Why, What, and How of product use. The Why involves the users' motivations for adopting a product, whether they relate to a task they wish to perform with it, or to values and views associated with the ownership and use of the product. The What addresses the things people can do with a product—its functionality. Finally, the How relates to the design of functionality in an accessible and aesthetically pleasant way. UX design starts from the Why, then determines the What and finally the How in order to create products that users can form meaningful experiences with. This, as not a simple process and intense thought, needs to be paid by a good User Experience Designer due to which most companies are willing to pay a bombshell salary to hire talented User Experience and User Interface designers.
